Professional Summary

Senior Full-Stack JavaScript Developer and AI Engineer with 16 years of experience, including 10 years dedicated to enterprise mobile application ecosystems and cross-platform architecture and 6 years into Full stack JavaScript Developer. Specializing in the MERN stack, cloud-native architectures, and autonomous workflows. Proven track record of architecting high-performance distributed systems, robust backends (Node.js, Nest.js), and dynamic, responsive frontends (React, Angular). Adept at integrating Agentic AI and data analytics to optimize complex enterprise supply chain and logistics systems. Strong expertise in AWS ecosystem, performance engineering, and relational/NoSQL database management.

Technical Skills

- **Core Languages:** JavaScript (ES6+), TypeScript, HTML5, CSS3, Python
- **Frontend Development:** React, Redux, Angular, Responsive Design
- **Backend Development:** Node.js, Nest.js, Express.js, RESTful APIs, GraphQL
- **Databases & Caching:** MongoDB, PostgreSQL, MySQL, Redis, Amazon QLDB
- **AI & Vector Databases:** Pinecone, ChromaDB, LangChain, CrewAI, LangGraph, Pandas
- **Cloud & DevOps:** AWS (Lambda, API Gateway, EC2), Docker, CI/CD pipelines, Git, Linux
- **Mobile / Legacy:** Android (Java), Ionic, Cordova

Professional Experience

ITC Infotech | Lead Consultant

Noida, India | February 2023 – February 2026

- Architected and deployed enterprise Supply Chain Systems (DSCS) using React, Node.js, and Python, improving material allocation accuracy and logistics tracking efficiency across global operations.
- Engineered high-performance filtering engines and decoupled heavy application modules, reducing UI latency and boosting system-wide responsiveness.
- Integrated Single Sign-On (SSO) for secure, centralized user authentication across the SCVitals application framework.
- Built predictive analytics dashboards utilizing Python and SQL data pipelines to forecast potential logistics bottlenecks and surface real-time actionable suggestions.
- **Environment:** React, Redux, Node.js, SQL, Redis, Python, FastAPI, Django, REST APIs, Git.

Assimilate Solutions | Senior Software Engineer

Noida, India | February 2021 – January 2023

- Designed and implemented serverless architectures using AWS Lambda and Node.js to automate real-time product health-monitoring tasks, cutting infrastructure overhead.
- Developed immutable database schemas using Amazon QLDB (Blockchain ledger technology) to ensure bulletproof audit logging for compliance-critical data.
- Built modular web components with Nest.js and Angular, creating highly scalable APIs and data-heavy administrative dashboards.
- **Environment:** Node.js, Angular, AWS Lambda, PostgreSQL, Nest.js, Amazon QLDB.

Earlier Career Summary into Mobile Application Development (2010 – 2020)

- **Iron Systems India Pvt. Ltd. | Principal Software Engineer:** Led full-stack engineering for a globalized messaging system and automated image optimization engines using Node.js and Loopback. Optimized mobile delivery paths by integrating legacy Android and Ionic frameworks, achieving significant application performance improvements.

Environment: Node.js, Loopback 3.0, MySQL, MongoDB, Ionic, Typescript, Android, iOS
- **Agreeya Solutions | Lead Consultant:** Architected enterprise-grade web frameworks for core operational modules, including expense management systems, dynamic survey engines, and 2FA security protocols

Environment: React, Angular, Ionic, Node.js, .NET
- **R Systems International (Senior Software Engineer):** Developed hybrid mobile applications, implementing advanced Google Maps routing and OAuth security integrations.

Environment: JavaScript, JSX, Webpack, Node.js, Linux, Genbox, Ionic, Android, React.js
- **Infogain India (Assistant Consultant):** Contributed to the core MagicBricks Android ecosystem, engineering search-buy-rent features to scale user traffic.

Environment: Android, Java
- **HCL Technologies (Member Technical Staff):** Programmed communication frameworks for global clients (NTT Docomo, Western Union); optimized SQLite database performance.

Environment: Android, Java, HTML5, CSS3, JavaScript, AngularJS, jQuery, jQuery-mobile, PhoneGap, SQLite, J2EE, MongoDB, Apache Felix, SVG, WI-FI Commander, WinSCP, Putty, Ikivo, SVN, MKS
- **Magic Software (Software Engineer):** Managed R&D for cross-platform eBook engines and automation tooling using Java and Shell Scripting.

Environment: Android, Java, JavaScript, jQuery, jQuery-mobile, PhoneGap, Sencha Touch, iOS, Flex, ActionScript 3.0, Shell Script, SQL, SVN

Projects

Autonomous Supply Chain Intelligence Agent

- Developed an Agentic AI workflow using Python and CrewAI to orchestrate a Research Agent (web scraping global logistics data) and a Reasoning Agent to accurately predict supply chain "Hold" reasons and disruptions.

Intelligent PDF Insight & Compliance Engine

- Architected a Retrieval-Augmented Generation (RAG) pipeline utilizing Node.js, Python, and LangChain to parse complex legal and technical documentation, automating compliance auditing and executive summary generation.

Education

- Master of Computer Applications (MCA) | AIT, Greater Noida (UPTU) in 2010
- Bachelor of Science (B.Sc.) | Lucknow University in 2007

Certifications

- IBM Certified Back-End Developer
- IBM Certified Data Scientist
- IBM Certified RAG and Agentic AI Specialist
